

Hammock chair lounge

Currambera kiwi CUL21-4

The Lounger is the largest LA SIESTA hammock chair. In English, 'Lounger' signifies a 'deck' chair as well as an 'idle person'. The Lounger combines the feel of a hammock and the space-saving qualities of a hammock chair. The long spreader bar (140 cm) as well as the large fabric surface (130 x 210 cm) create a relaxed lounging sensation, its overall height is 185 cm. Our hammock line Currambera with its wide range of available colours (cherry, blueberry, kiwi, apricot) and large variety of products (single hammock, double hammock, hammock with spreader bars, hammock chair Basic, hammock chair Lounger) is particularly popular. Hammock chair Lounger Currambera kiwi is made of pure, high-quality cotton. It is from Colombia, where hammocks have always

been an essential part of everyday life. This hammock chair features a tearproof selva created by doubling the weft threads, thus making sure that you will be able to enjoy your peaceful LA SIESTA oasis for many years to come. The fabric of our Currambera line is densely woven and colour-fast. The spreader bar is made of high-quality hardwood from well-managed forests (FSC®). A trademark characteristic of a LA SIESTA hammock chair is its integrated safety swivel, allowing for secure rotation of your hammock chair, thus making it more durable. Rule of thumb: the wider the spreader bar and the larger the fabric surface, the more comfort you get from your hammock chair.

Hammock chair lounger **Currambera kiwi** CUL21-4

Pure Cotton

Pure cotton is a material that is very soft to the touch, comfortable, tearproof and durable. Its long fibres give colours room to shine.

Integrated safety swivel

Another great detail developed and patented by LA SIESTA is the integrated safety swivel for increased safety and comfort. It enables rotation around your own axis without overwinding the suspension ropes.

Tearproof selvage

The two borders of the lying surface feature a particularly tight weave. Thanks to this robust surface, exceptional stability is guaranteed.

High number of suspension cords

Additional comfort thanks to a multitude of suspension cords that distribute the weight equally to the cloth of the hammock and hence give a unique feeling of agravity.

Responsible forestry

The FSC® logo guarantees that the wood used in a product has been produced in compliance with the strict rules of the Forest Stewardship Council from sowing the tree via several processing steps up to the final product. FSC®-Licence Code: C012427
